DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-10 and 13-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Cheline et al. (7,197,550).
- 4. Cheline teaches a method and system (abstract) of establishing tunnels between subnets (col. 1, line 1 col. 5, line 6; col. 18, line 58 col. 19, line 11), wherein a lease broker allocates static IP address for use in a relocated network subnet at a remote location (col. 5, line 6 col. 6, line 60; col. 13, lines 20-50), for establishing the link and configuring services (col. 9, line 1 col. 10, line 30). The services comprise routing, DNS, and DHCP servers (col. 8, lines 45-65). The tunnel is configured to traverse a firewall with NAT (col. 6, line 60 col. 8, line 50; col. 12, lines 10-20), and includes packet encapsulation (col. 7, lines 45-65).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/632,249

Art Unit: 2145

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 3

- 6. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cheline as applied to claim 1 above, and further in view of Spacey (2002/0038371).
- 7. Cheline does not expressly disclose that the service comprises a mail server. Spacey teaches a method and system (abstract) of using virtual private network establishing to connect to services behind a firewall (Paras. 1-32 and 156-160), wherein the service includes a mail server (Paras. 127-140). At the time the invention was made, one of ordinary skill in the art would have added Spacey to Cheline in order to extend Cheline to other application protocols (Paras. 44 and 116).
- 8. Claims 12, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheline as applied to claims 1 and 19 above, and further in view of Das et al. (6,992,994).
- 9. Cheline does not expressly disclose that a tunnel is configured to automatically reconnect in response to a change in an address associated with one of the components of the tunnel. Das teaches a method and system (abstract) of providing virtual private networks in mobile IP (col. 1, line 1 col. 8, line 5; col. 12, lines 25-45); wherein a connection remains regardless of change in a home address (col. 9, lines 45-65). At the time the invention was made, one of ordinary skill in the art would have added Das to improve Cheline's telecommunications (DSL) networks (col. 5, lines 45-65).
- 10. Cheline discloses that a heartbeat signal is periodically emitted across the tunnel (col. 12, lines 40-50; col. 13, lines 30-35).

Art Unit: 2145

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They regard further teachings on tunneling, security, and address change management.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melvin H. Pollack whose telephone number is (571) 272-3887. The examiner can normally be reached on 8:00-4:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Cardone can be reached on (571) 272-3933. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
